Informatics student Universitas Mercu Buana with hands-on, cross-disciplinary project experience spanning Data Science, Machine Learning, Big Data engineering , Natural Language Processing, Geographic Information Systems (QGIS), and Computer Vision (. Comfortable taking a project from raw data to a working, evaluated model, and able to communicate technical findings clearly in both English and Bahasa Indonesia. Also brings practical business exposure from operating a family retail business. Seeking a Data/AI-focused internship to apply this foundation to real-world problems.

Education Level

Bachelor of Informatics, University of Mercu buana Sept 2023–Present

GPA: 3.69 / 4.00 Currently in Semester 7. Relevant coursework: Data Science, Machine Learning, Big Data, Natural Language Processing, Generative AI, Computer Vision, Geographic Information Systems, UX/UI Design, Business Intelligence, Entrepreneurship.

Projects Experience

Diabetes Risk Classification Model Comparison *Machine Learning, Data Science*

- Compared four classifiers (Naive Bayes, Decision Tree, Random Forest, AdaBoost) to predict diabetes risk from a highly imbalanced health-survey dataset (253,680 records, 86:14 class split) sourced from the UCI ML Repository / Kaggle.
- Tackled class imbalance with SMOTE and class-weighting, tested Chi-Square and Mutual Information feature selection, and validated with 10-fold cross-validation; selected AdaBoost + SMOTE + Chi-Square as the champion model (F1 0.43, AUC 0.798) and tuned the decision threshold for high-recall medical screening.

End-to-End Salary Prediction & Job-Type Classification Pipeline *Big Data Course*

- Built a full PySpark → Scikit-learn → XGBoost pipeline on the *LinkedIn Job Postings (2023–2024)* Kaggle dataset, covering salary regression and work-type classification (remote/hybrid/onsite).
- Designed reusable prompt templates to standardize pipeline code and academic report generation for future coursework.

Peatland Fire Early Warning Prediction System *Big Data*

- Developed a fire-risk prediction system for Sumatra and Kalimantan using NASA FIRMS satellite data with XGBoost and Random Forest classifiers.
- Built a composite risk score to rank provinces by fire risk; presented results in a 10-slide report with a custom data visualization theme.

Vehicle Rental Web Application *Smart Web Enterprise Course*

- Independently designed and built a full-stack vehicle rental platform in Laravel, covering the complete rental workflow: user authentication, fleet/vehicle management, booking and reservation, an admin dashboard, and payment handling.
- Owned the project end-to-end as a solo developer, from database design through backend logic and UI, delivering a fully functional prototype of the customer-to-admin rental cycle.

Certification

- Oracle Academy — Database Programming with PL/SQL (Award of Course Completion, 22 Des 2024) PL/SQL Database Programming Semester 2 (Award of Final Exam Completion, 23 Des 2024)
- Understanding Machine Learning — DataCamp (Oct 2024)
- Introduction to Software, Programming, and Databases — Coursera

Organizational Experience

Mercu Buana Englis Club (MBEC) Sept 2024–present

Member of Newcast division and WareHouse Division

- Committee Member, Mercu Buana English Event 2025
- Committee Member, Open Recruitment & Open House 2025
- Committee Member, Leadership Training Program MBEC 2026

Skills and Language

- **Technical:** Python, PySpark, Scikit-learn, XGBoost, IndoBERT / Hugging Face Transformers, OpenCV, QGIS, SQL / BigQuery, PHP (Laravel), MySQL, JavaScript, HTML
- **Tools:** Google Colab, Jupyter Notebook, Microsoft Office Suite (Word, Excel, PowerPoint), Google Sheets
- **Soft Skills:** Customer Focus, Communication, Strategic Planning, Result-Driven
- **Languages:** English (Beginner), Bahasa Indonesia (Native)
